

Decoder Farmer (Desktop Application)

About Project:

We have designed this application to farm Airdrop for various token.

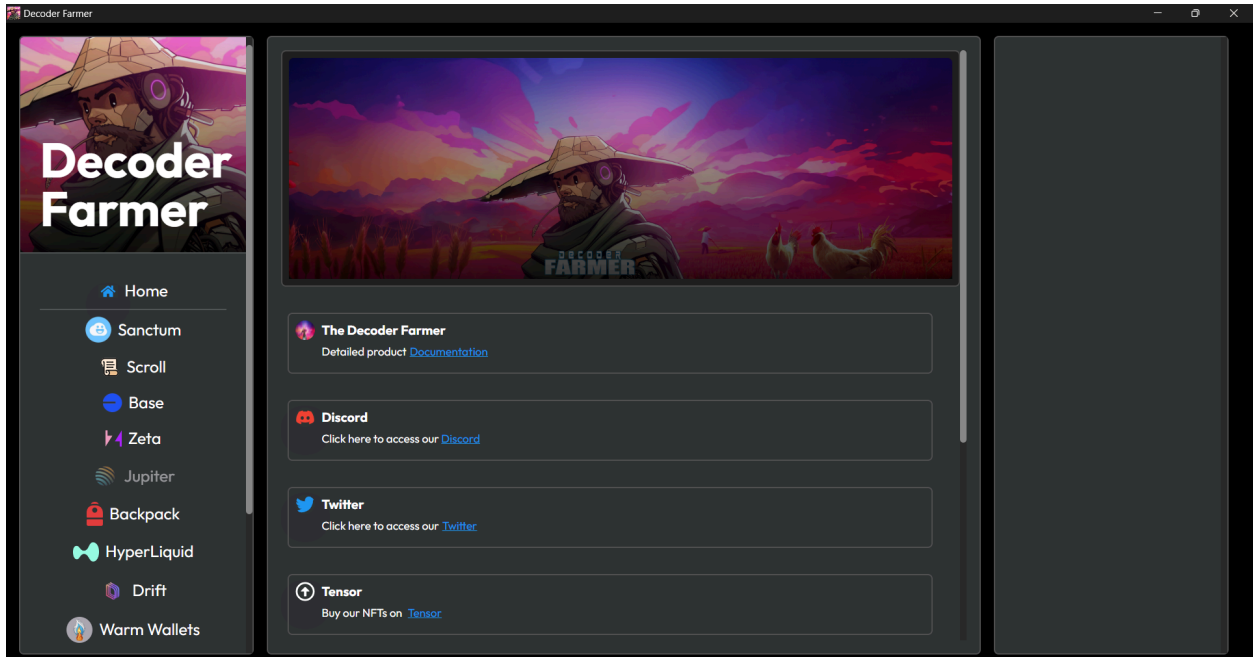

What is Airdrop?

Airdrop Farming refers to the set of actions users undertake to boost the number of tokens they get from a retroactive airdrop. In simple terms, it's a way for users to try and get more tokens by working around the rules. This often involves using multiple addresses or repeating certain tasks to increase their rewards

Installation:

1. Use .exe file to install the desktop application to your Windows device and .deb file to install application on your Linux device and .dmg file to install application on your MacOS device

After Installation you will get this home page

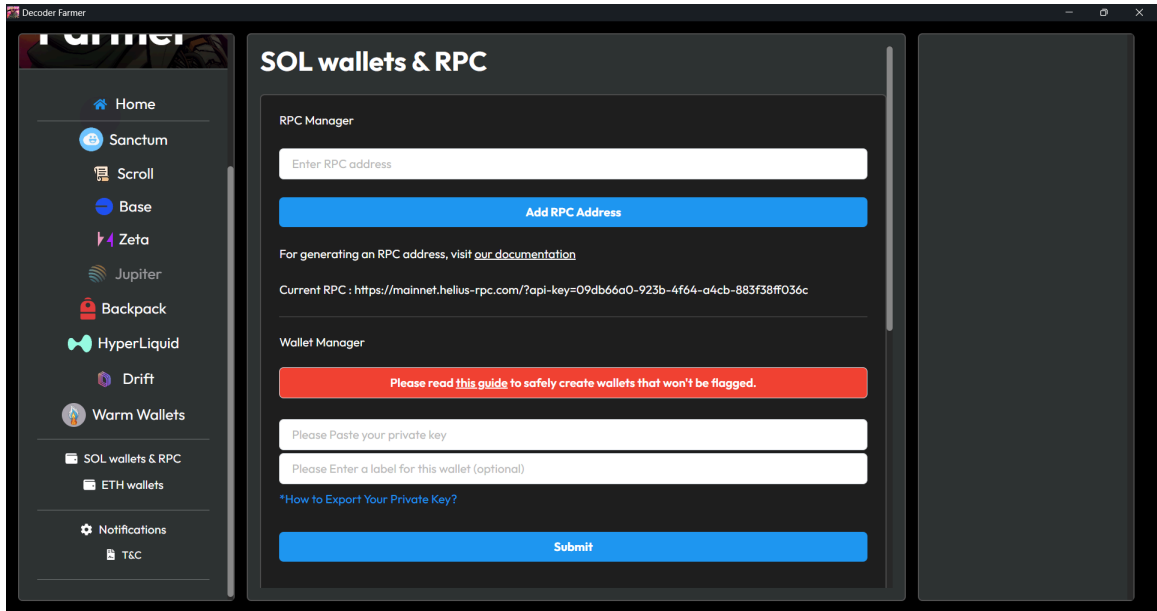

Wallet Management:

- **Solana Wallet Management**

Solana Wallet Management section is designed to manage your wallet keys from metamask and other wallet platforms.

Inside This Wallet Management we can do:

- ❖ Add Wallet private keys to our applications.
- ❖ Add RPC Keys for Transaction you can obtain RPC keys from various RPC provides (e.g mainnet)
- ❖ Export Saved keys to your local system.
- ❖ Import bulk keys to application.

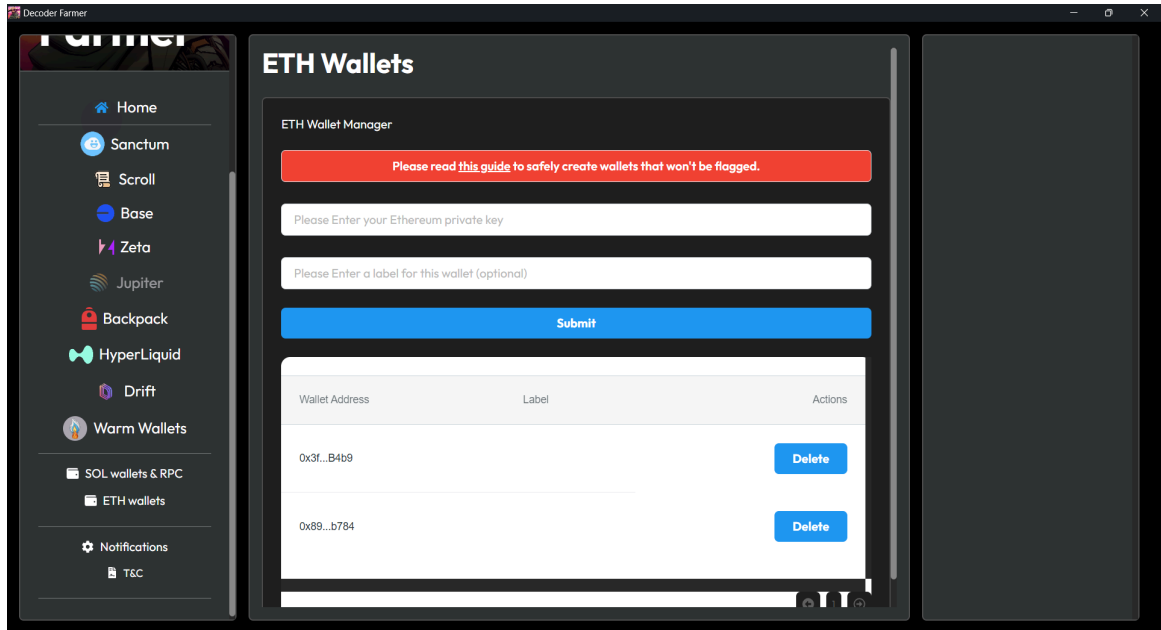

All the saved wallet keys are protected with encryption of key to maintain the security of your wallets.

- **Ether Wallet Management**

Ethereum Wallet Management section is designed to manage your wallet keys from metamask and other wallet platforms.

Inside This Wallet Management we can do:

- ❖ Add Wallet private keys to our applications.
- ❖ Add Label nick name to your keys.

Sidebar Management::
